**Stratus** | ztC Edge

## Replacement Components
ztC Edge node

Power adapter
(use with existing power cable)

1 Locate node to replace. Faulted node is either powered off (automatically) or powered on with SYS LED off or solid green (not healthy). If node is already powered off, skip to step 3.

SYS ✓

Node (front)

2 If faulted node is still powered on, open ztC Console to resolve issues blocking shutdown. For example, failed network connection on healthy node could cause dependency on faulted node. Resolve issues and shut down faulted node.
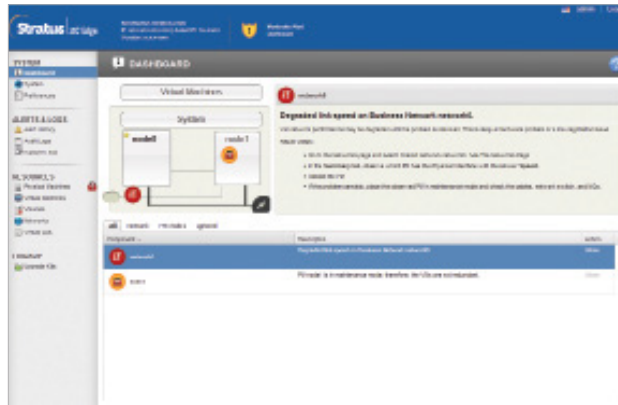

3 Disconnect power cable from faulted node, then disconnect network cables and physically remove node from system. For rail or wall-mounted node, remove existing mount kit from faulted node and reinstall on replacement node. If needed, replace power adapter.

Faulted node (front)
Faulted node (rear)

4 Add replacement node to system. Reconnect network cables, then reconnect power to automatically power on node. Node replacement is complete. System begins to synchronize with no user input required.
