visit Stratus Customer Service at <http://www.stratus.com/support>.

1 Connect keyboard and monitor to one node, then connect power.

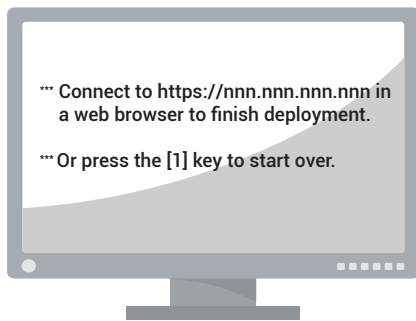

2 Node powers on automatically. If not, press power button. Wait for node to boot, press **1** to deploy first node in dual-node system, then follow on-screen instructions. (Node might beep while booting, which is normal.)

3 When instructed, connect blue and yellow network cables from first node to second node, then connect P1 port of each node to your existing LAN. Connect power to second node and verify that it powers on.

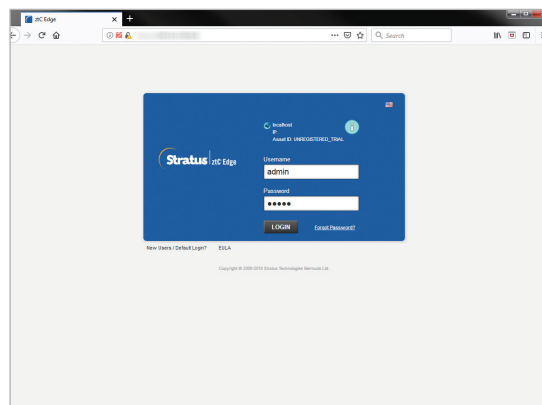

4 Wait up to 15 minutes for system to display `https://nnn.nnn.nnn.nnn` address, and for SYS LED to blink on both nodes. Record address for use in step 5.

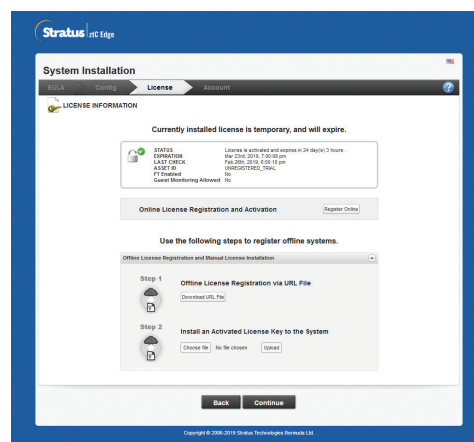

`https://_ _ _ . _ _ _ . _ _ _ . _ _ _`

5 On networked PC or laptop, open web browser and enter address from step 4 to continue configuring system. If security message is displayed, follow browser instructions to allow site to load. Log on with default username and password of **admin**. Complete **EULA** and **Config** screens.

6 On **License** screen, follow link to register system and download permanent license key. See separate registration sheet for ASSET ID and instructions. Install license key on system and set new **admin** password to complete deployment.

Recommended

Before using system, ensure it is running latest software. See Release Notes for details and download software from <https://www.stratus.com/services-support/downloads>.

Optional

Disconnect keyboard and monitor for headless operation. On both nodes, fasten captive screws on power connectors using 1/8" slotted screwdriver.

Optional

Fasten DIN rail mount or wall mount to each node using #2 Phillips screwdriver. Or, install rubber feet for freestanding nodes only.

Power adapter mount plate for DIN (shown) or wall mount

Rubber feet for freestanding node
