

Use only for adding a second node.
For initial deployment, see **ztC Edge 100i-s Systems: Deploying a Single-Node System.**

ztC Edge 100i-s Systems: Adding a Node

User-supplied Components

1/8" Slotted
screwdriver
(if mounting)

#2 Phillips
screwdriver
(if mounting)

Network cable

If already using static IP address for Node0, contact network administrator to assign static IP address for Node1; otherwise, DHCP assigns this automatically. Enter other network settings only if needed for reference.

System IP address
(static required) ____ . ____ . ____ . ____

Node0 IP address ____ . ____ . ____ . ____

Node1 IP address ____ . ____ . ____ . ____

Gateway address ____ . ____ . ____ . ____

Network mask ____ . ____ . ____ . ____

DNS servers ____ . ____ . ____ . ____

____ . ____ . ____ . ____

(System and node IP addresses must be on same subnet.)

Stratus Components

ztC Edge node

Power cable

Power adapter

Power adapter
DIN/wall mount plate

Rubber feet (4)

Network cables
(blue and yellow)

ztC Edge DIN rail
mount plate

ztC Edge DIN rail
mount brackets (3)

ztC Edge wall
mount brackets (2)

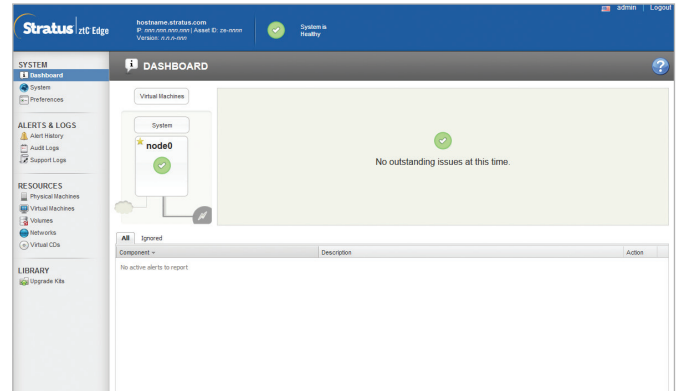

M3*4L
flat-head
Phillips-head
screws (9)

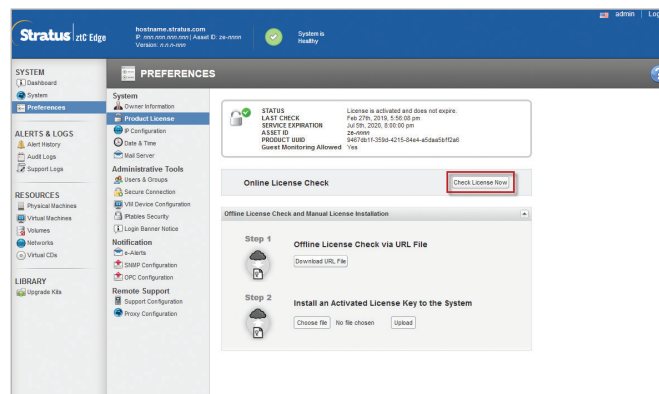

M3*5L
round-head
Phillips-head
screws (4)

visit Stratus Customer Service at <http://www.stratus.com/support>.

1 Confirm that running node is healthy – SYS LED is flashing and ztC Console **Dashboard** page displays green marks with no outstanding issues. Resolve any issues before adding second node.

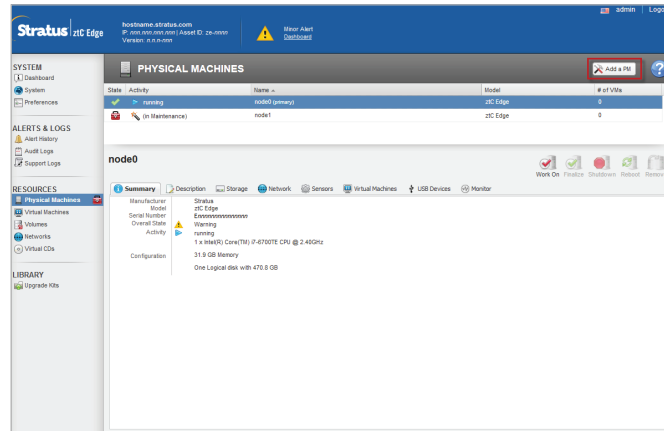

2 In ztC Console, open **Preferences** page and click **Product License**. Click **Check License Now** to update license. **Dashboard** page indicates that dual-node upgrade is pending. (Note: Consider delaying next steps until maintenance window, because VM performance slows until you restart VMs in step 6.)

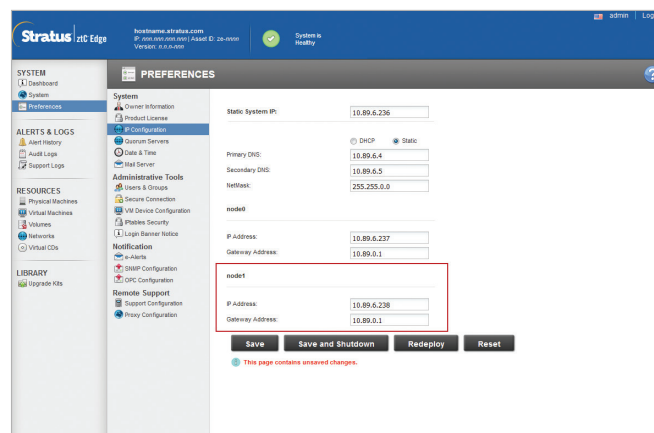

3 Connect blue and yellow network cables from first node to second node, then connect P1 port of second node to your existing LAN (same subnet as P1 on first node). Connect power to second node and verify that it powers on. (You can safely ignore alerts about second node in ztC Console until synchronization completes in step 6.)

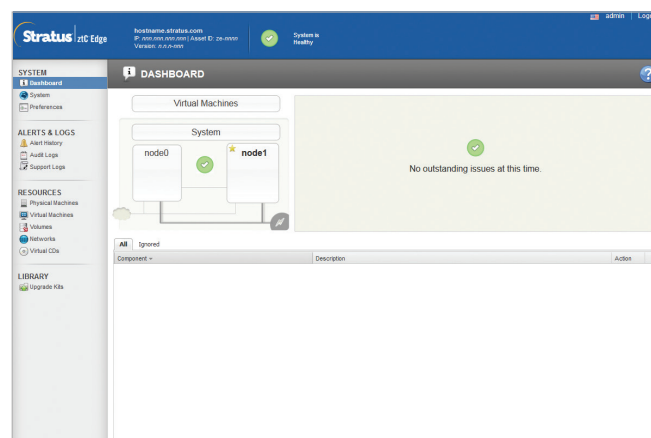

4 After connecting second node, wait up to 20 minutes for SYS LED on second node to flash and for **Add a PM** button on **Physical Machines** page to become active. Click **Add a PM**. (If button remains inactive, verify that license is updated, connections are correct, and second node is powered on.)

5 In ztC Console, open **Preferences** page and click **IP Configuration** to verify settings. If needed, enter static IP address for second node (**node1**) and click **Save**.

6 VMs may synchronize for hours, after which you must restart VMs to enable redundancy and clear warnings. When system is synchronized and VMs are running, **Dashboard** displays green check marks with no outstanding issues.

Recommended

Ensure that system is running latest software. See Release Notes for details and download software from <https://www.stratus.com/services-support/downloads>.

Optional

Fasten captive screws on power connector using 1/8" slotted screwdriver.

Optional

Fasten DIN rail mount or wall mount to node using #2 Phillips screwdriver. Or, install rubber feet for freestanding node only.

Power adapter mount plate for DIN (shown) or wall mount

Rubber feet for freestanding node
