visit Stratus Customer Service at <http://www.stratus.com/support>.

1 Connect keyboard and monitor to node, then connect power.

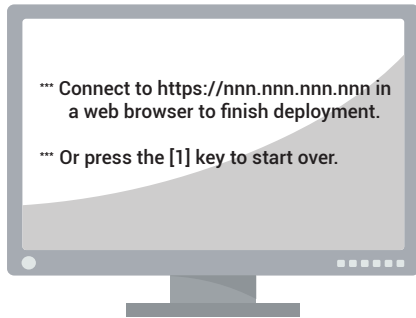

2 Node powers on automatically. If not, press power button. Wait for node to boot, press **s** to deploy single-node system, then follow on-screen instructions. (Node might beep while booting, which is normal.)

3 When instructed, connect P1 port of node to your existing LAN. (If on-screen status displays **waiting for second node on network**, press **1** to start over and press **s** to deploy single-node system.)

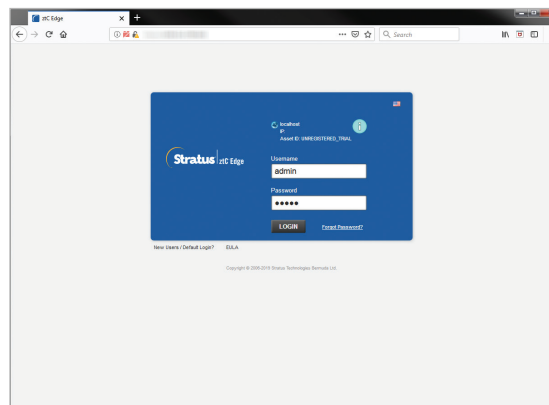

- 4** Wait up to 5 minutes for system to display `https://nnn.nnn.nnn.nnn` address, and for SYS LED to blink. Record address for use in step 5.

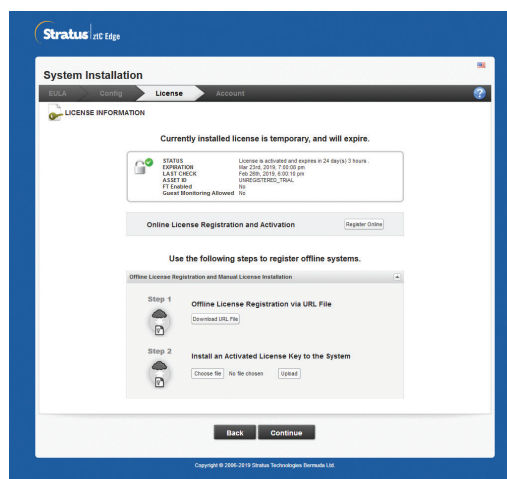

`https://---.---.---.---`

- 5** On networked PC or laptop, open web browser and enter address from step 4 to continue configuring system. If security message is displayed, follow browser instructions to allow site to load. Log on with default username and password of **admin**. Complete **EULA** and **Config** screens.

- 6** On **License** screen, follow link to register system and download permanent license key. See separate registration sheet for ASSET ID and instructions. Install license key on system and set new **admin** password to complete deployment.

Recommended

Before using system, ensure it is running latest software. See Release Notes for details and download software from <https://www.stratus.com/services-support/downloads>.

Optional

Disconnect keyboard and monitor for headless operation. Fasten captive screws on power connector using 1/8" slotted screwdriver.

Optional

Fasten DIN rail mount or wall mount to node using #2 Phillips screwdriver. Or, install rubber feet for freestanding node only.

For DIN
rail mount

For wall
mount

Power adapter mount
plate for DIN (shown)
or wall mount

Rubber feet for
freestanding node
